SUMMARY

Full Stack Developer with 8+ years of experience building robust web solutions — from vehicle tracking systems and e-commerce platforms to intelligent WhatsApp automations and AI-driven self-service bots.

I currently build a complete vehicle-tracking ecosystem: a multi-company ERP in Laravel 11/PHP 8.3 with finance and support modules, a new tracking platform in Java 25 + Spring Boot 4 integrated with the ERP and the legacy platform, and my own AI agent harness (Arvyn). Day to day I use Cursor and Claude Code with Claude Opus 5.5, Claude Fable and Grok. I also look after the server, backup routines, and making sure new improvements do not take the production app down.

CURRENT ROLE

ERP, new tracking platform and AI harness — **Jun/2026 – present**

BolTech Trackers — Full Stack / Backend

- Multi-tenant ERP on Laravel 11, PostgreSQL, Redis, RabbitMQ, WebSockets with Reverb and REST with Swagger.
- Finance module with its own database: Itaú bolecode billing microservice (boletos and PIX), credit and debit cards via e.Rede, cash drawers and collection rules.
- Support module with tickets, pending items, checklists and a knowledge base. NF-e/NFS-e invoices via Focus NFe.
- New tracking platform in Java 25 + Spring Boot 4 (Spring Security/JWT, JPA, Flyway, Redis, OpenAPI and CI with GitHub Actions).
- Integration between the legacy platform and the new one, with both running together in production.
- Debian/Apache server, Supervisor workers and automatic database and storage backups. Production protected with environment keys, automated tests and review before every merge.
- Development with Cursor and Claude Code (Claude Opus 5.5, Claude Fable and Grok) and with Arvyn, a TypeScript/Node 22 harness that orchestrates agents as Planner → Coder → checks → QA → Reviewer, in parallel, with worktrees and isolated databases.

JOURNEY

Sep–Oct/2026	AI customer-service analysis and monitoring with Digisac and OpenAI. Audio transcription, image, video and PDF reading, evidence-backed reports and automated tests.
Apr–May/2026	Geocoding microservice (Node.js, BullMQ, Redis, Google, Photon and Nominatim) and a local Nominatim server with OpenStreetMap, Docker, Nginx and PostGIS.
2026	BolTech vehicle-tracking mobile app — Ionic and Angular. Layout, bug fixes and new features.
2025	WhatsApp self-service bot integrated with the Bolpar website, searching products around the clock.
2022–2024	Financial systems, Bling order automation, TTS audio campaigns and processing scripts.
2019–2020	Bolpar e-commerce, WhatsApp bulk messaging and integrations via API, webhook and WebSocket.
2018	Started as a full stack developer at BolTech Trackers and Bolpar. Built the vehicle tracking system from scratch.
2015–2021	Systems Analysis and Development (Uni/Opet). Bootstrap and JavaScript certificates (DevMedia) and an Angular specialization (desenvolvedor.io).

SELECTED PROJECTS

BolTech ERP — multi-company. Staged sales, credit analysis, billing, inventory, SIM cards, service orders, commissions and NF-e/NFS-e. REST API with Swagger, Reverb, queues, auditing, a scheduler and backups.
PHP 8.3 · Laravel 11 · PostgreSQL · Redis · RabbitMQ · Reverb · Swagger/OpenAPI · Sanctum · Focus NFe · PHPUnit · Pint

Finance module — Itaú bolecode and e.Rede cards. Accounts receivable and payable, duplicatas, boletos and PIX, cards with 3DS, tokenization, recurrence and refunds, cash drawers, withdrawals, write-off approvals and reports.
Laravel 11 · PostgreSQL · Itaú bolecode microservice · e.Rede · PIX · Boletos · REST

Support module. Tickets with sub-tickets, pending items, types and channels, checklists, a knowledge base and attachments. Authentication delegated to the ERP.
Laravel 11 · PostgreSQL · REST · Sanctum

New tracking platform (Boltech Platform). Separate channels for the app (JWT) and the ERP (API token), roles and permissions, auditing, alarms, geofences, push, position history with reverse geocoding and Flyway. Integrated with the ERP and the legacy platform, with PostgreSQL tests in CI and script-generated Postman collections.
Java 25 · Spring Boot 4 · Spring Security · OAuth2/JWT · JPA · Flyway · Redis · PostgreSQL 16 · OpenAPI · Gradle · GitHub Actions

Arvyn — AI agent harness. Planner → Coder → checks (PHPUnit, Pint, Gradle test) → QA → Reviewer, with parallel tasks, worktrees, databases cloned per slot, a request queue, pauses for human decisions, Discord notices and delivery by branch.
TypeScript · Node.js 22 · Claude Agent SDK · Claude Code · Cursor · Claude Opus 5.5 · Claude Fable · Grok · MCP

Server infrastructure. Debian/Apache VPS with development and production side by side, Supervisor per queue and per environment, automatic database and storage backups, and version switches that keep the app up.
Debian · Apache · Supervisor · PostgreSQL · pg_dump · Redis · Nginx · SSL

Also in the portfolio: the original tracking system, the mobile app on Google Play and the App Store, the BolTech website, Bolpar e-commerce, WhatsApp messaging and the self-service bot, AI customer-service analysis and the geocoding microservice. Full version at wellingtongalves.github.io.

TECHNOLOGIES

Backend	Laravel 11, PHP 8.3, Java 25, Spring Boot 4, Spring Security, JPA/Hibernate, Flyway, Gradle, Node.js, RabbitMQ, Reverb, Sanctum
Data	PostgreSQL, PostGIS, MySQL, Redis, data modeling and SQL
Integrations	Itaú bolecode (boletos/PIX), e.Rede (cards), Focus NFe (NF-e/NFS-e), Swagger/OpenAPI, Postman, REST, webhooks, WebSocket
DevOps	Debian, Apache, Supervisor, GitHub Actions, PHPUnit, Laravel Pint, Gradle test, Git worktrees, pg_dump, Docker, Nginx, SSL
AI in dev	Claude Code, Cursor, Claude Agent SDK, MCP, Claude Opus 5.5, Claude Fable, Grok, Arvyn
Frontend	TypeScript, Angular, Ionic, HTML, CSS, Tailwind CSS
