PROFILE

Full stack developer for 8+ years, based in Curitiba. At BolTech Trackers and Bolpar since 2018: vehicle tracking, ERP, finance, e-commerce and WhatsApp. I write the code, wire the integrations and keep the production server up.

EXPERIENCE

Full stack developer — **2018 – present**

BolTech Trackers and Bolpar Distributor — Curitiba

- Vehicle tracking built from scratch and still in production. Ionic and Angular app (Google Play and the App Store) and the BolTech website.
- Multi-company ERP on Laravel 11 and PHP 8.3: staged sales, credit, billing, inventory, SIM cards, service orders, commissions and NF-e/NFS-e through Focus NFe. API with Swagger, Redis and RabbitMQ queues, WebSocket with Reverb, Sanctum, an audit trail, PHPUnit and Pint.
- Finance on its own database: receivables and payables, duplicatas, boletos and PIX via Itaú bolecode, cards on e.Rede (3DS, token, recurrence and refunds), cash drawers, withdrawals, write-offs and reports.
- Support: tickets, sub-tickets, pending items, types, channels, checklists, a knowledge base and attachments. Login stays on the ERP.
- New platform in Java 25 and Spring Boot 4, live next to the old one and tied to the ERP. JWT on the app, an API token for the ERP, roles and permissions, audit, alarms, notices, geofences, push, position history with addresses and export, Flyway. PostgreSQL tests on GitHub Actions, OpenAPI and a Postman collection.
- Debian server with Apache, development and production on the same VPS, Supervisor queues, daily backups (pg_dump and files), Nginx and SSL. I ship with tests and a review, without taking the app down.
- WhatsApp: bulk messaging, a bot that looks up products on the Bolpar site, Bling orders (Cloud Run) and audio campaigns with Google TTS. Also a finance tracker and sales-participation credits from Bling.
- Bolpar e-commerce: catalog, quote cart and an ERP link over WebService (NuSOAP).
- Geocoding (Apr–May/2026): Node.js, BullMQ, Redis, Google, Photon and Nominatim. A local Nominatim server with OpenStreetMap, Docker, Nginx and PostGIS on WSL2, a PowerShell startup script and Python monitoring.
- Digisac customer service (Sep–Oct/2026): text, audio, images, video and PDFs with OpenAI (GPT-4.1 mini and transcription), agent guidance, follow-ups, reports with the evidence, API cost tracking, JSON, cache, a duplicate-action lock, simulation mode and tests. PM2 and FFmpeg.
- Arvyn, a program I wrote in TypeScript and Node 22 on the Claude Agent SDK. It plans, codes, tests (PHPUnit, Pint, Gradle), runs QA and review in worktrees with an isolated database. It queues work, pauses when I need to decide, pings Discord and delivers by branch. Day to day I use Cursor and Claude Code (Claude Opus 5.5, Claude Fable and Grok) and MCP.

EDUCATION

Systems Analysis and Development — Uni/Opet, since 2015.

Bootstrap and JavaScript — DevMedia, 2017. Angular (SPA and advanced) — desenvolvedor.io, 2021.

SKILLS

BACKEND
PHP 8.3, Laravel 11, Java 25, Spring Boot 4, Spring Security, JPA/Hibernate, Flyway, Gradle, Node.js, BullMQ, RabbitMQ, Reverb, Sanctum, Python

DATA
PostgreSQL, PostGIS, MySQL, Redis, data modeling and SQL

INTEGRATIONS
Itaú bolecode (boletos and PIX), e.Rede (cards), Focus NFe, Digisac, OpenAI, Swagger/OpenAPI, Postman, REST, NuSOAP, webhooks, WebSocket, JSON, XML

DEVOPS
Git, Debian, Ubuntu/WSL2, Apache, Supervisor, Docker, Nginx, GitHub Actions, PHPUnit, Laravel Pint, pg_dump, PM2, SSL, PowerShell

AI IN CODE
Claude Code, Cursor, Claude Agent SDK, MCP, Claude Opus 5.5, Claude Fable, Grok, Arvyn

FRONTEND
HTML, CSS, JavaScript, TypeScript, Angular, Ionic, jQuery, Bootstrap, Tailwind CSS

CLOUD AND OTHER
Google Cloud Run, Google TTS, AWS, Hostinger, Google Ads, Analytics, Tag Manager, SEO, Nominatim, OpenStreetMap, FFmpeg
